

## Introduction

This handout provides more details on the report to go with the final course project you are currently working on. As indicated in the project handout:

“The final report should be a well-presented technical report discussing your project (in pdf format). If your project is primarily a programming effort, you should explain how the program works, give specific sample runs and analyze the results. The report should be 5-10 pages in length, although may be less if you do the standard project. If your project team is more than one person then the report should indicate what each person did on the project.”

Again, the final project and report are due Friday, December 13, 2025.

## Report Details

In addition to the overview provided above, your report needs to address each of the following questions. You are encouraged to explicitly use this format in organizing your report.

- What is your name(s)?
- What project did you select?
- Describe the work did you do on the project including any deviations from the description if you chose standard project.
- What are the results you obtained? As appropriate, it is important you include sample output demonstrating functionality/results of your project.
- What went well on the project?
- What did you learn?
- What was hard?
- What, if anything, did you do beyond the standard project description (if you based your project on it)?
- What, if anything, did you not complete that was in the basic project description or your initial design?
